Whole-unit area sum · dimK = 16 · clock target = 1410 MHz

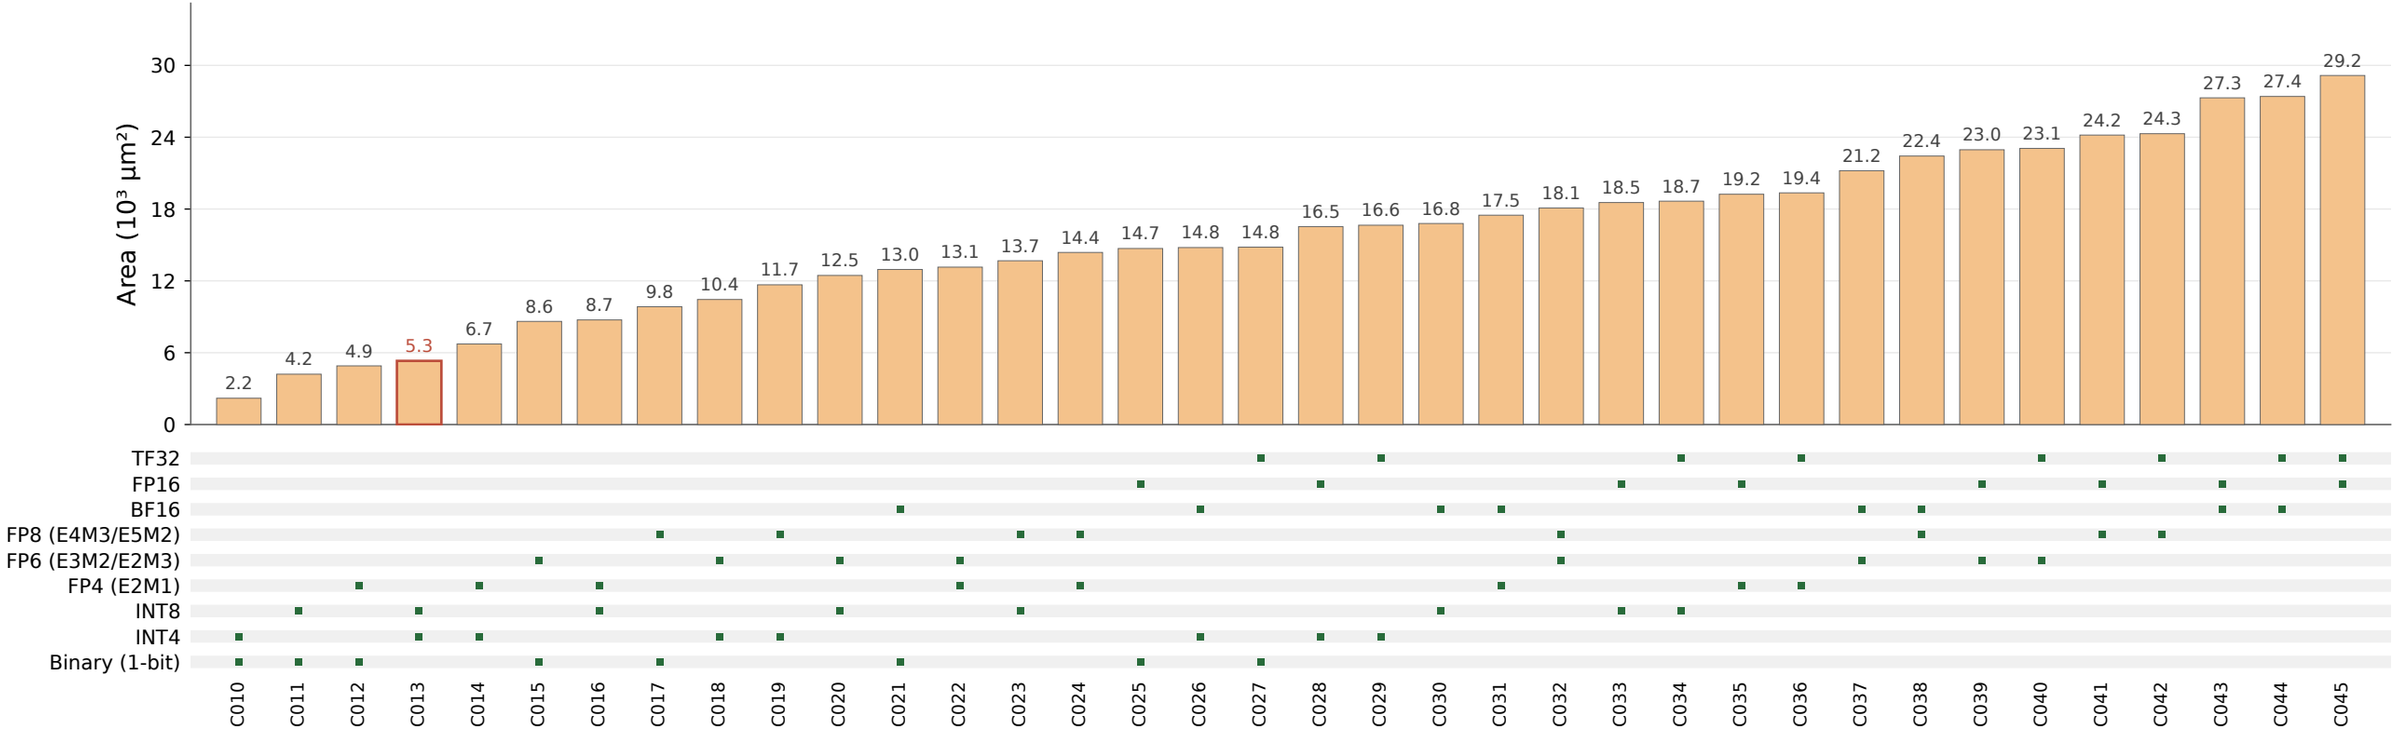

1 family · 9 combinations

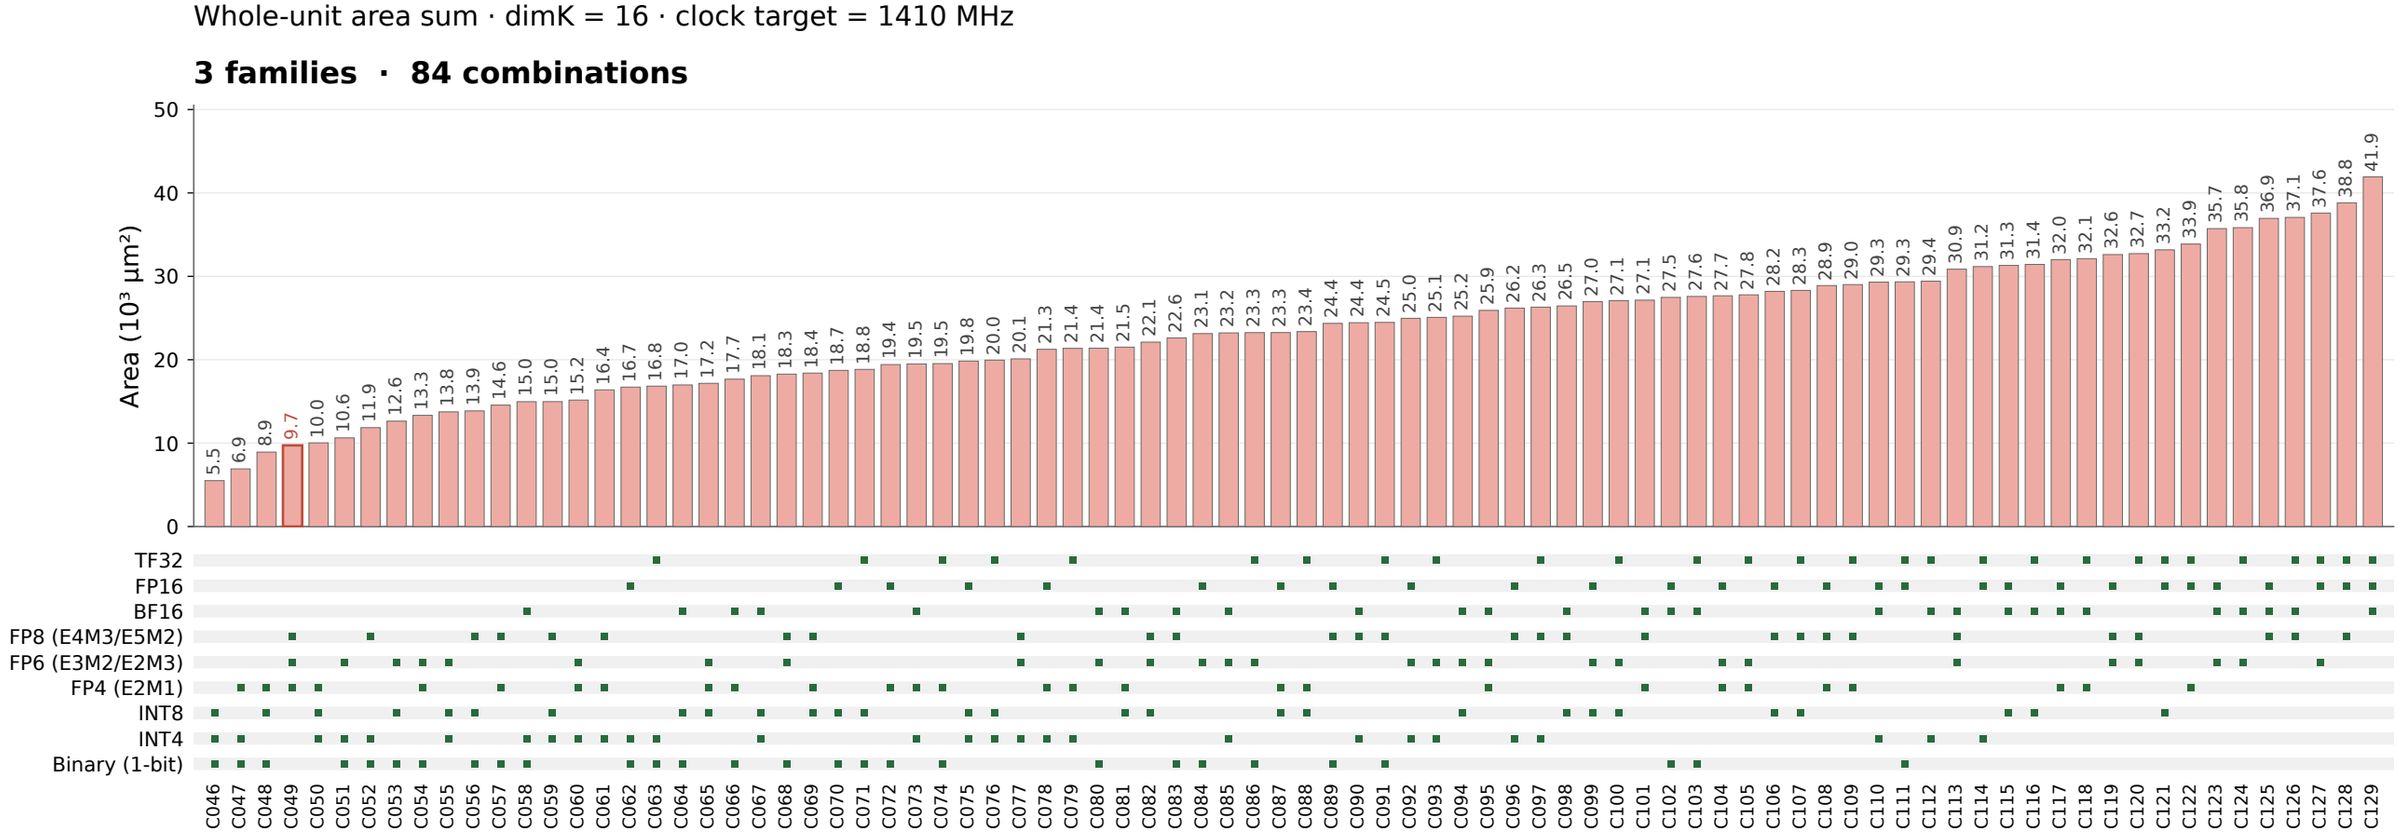

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Whole-unit area sum · dimK = 16 · clock target = 1410 MHz

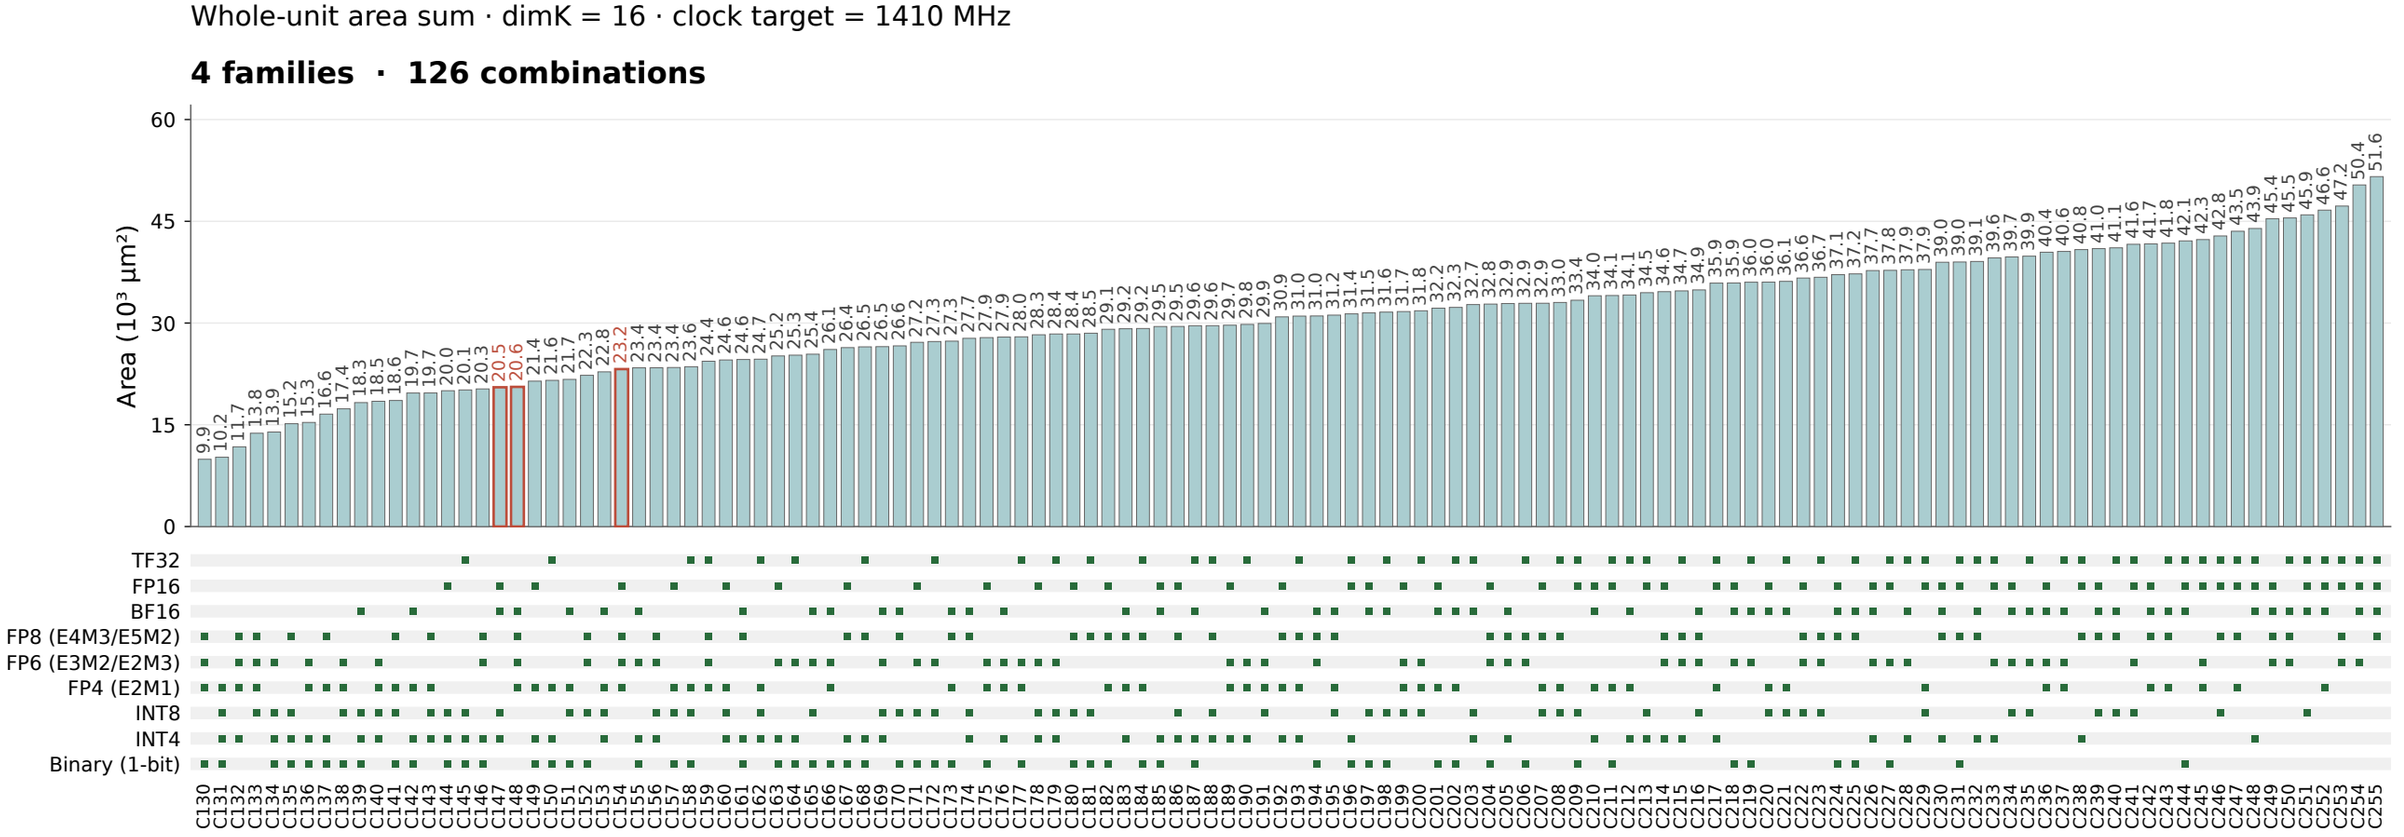

2 families · 36 combinations

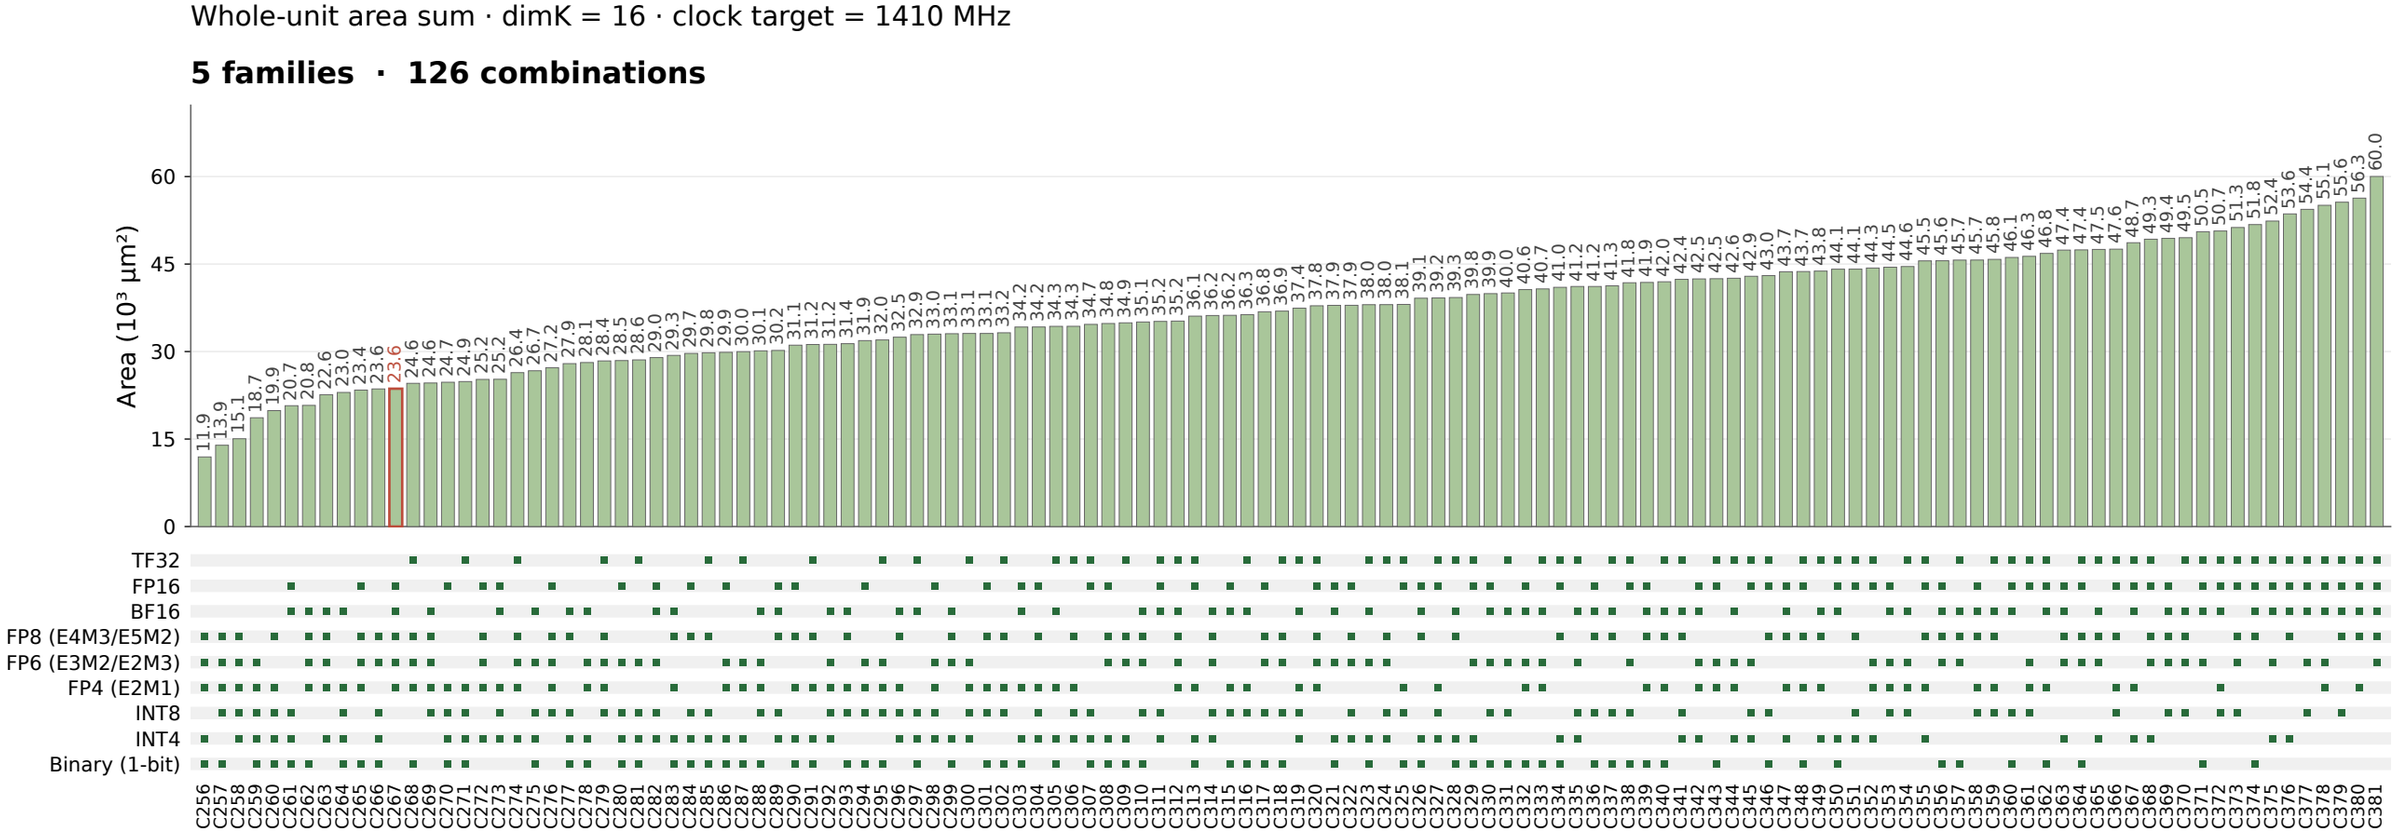

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

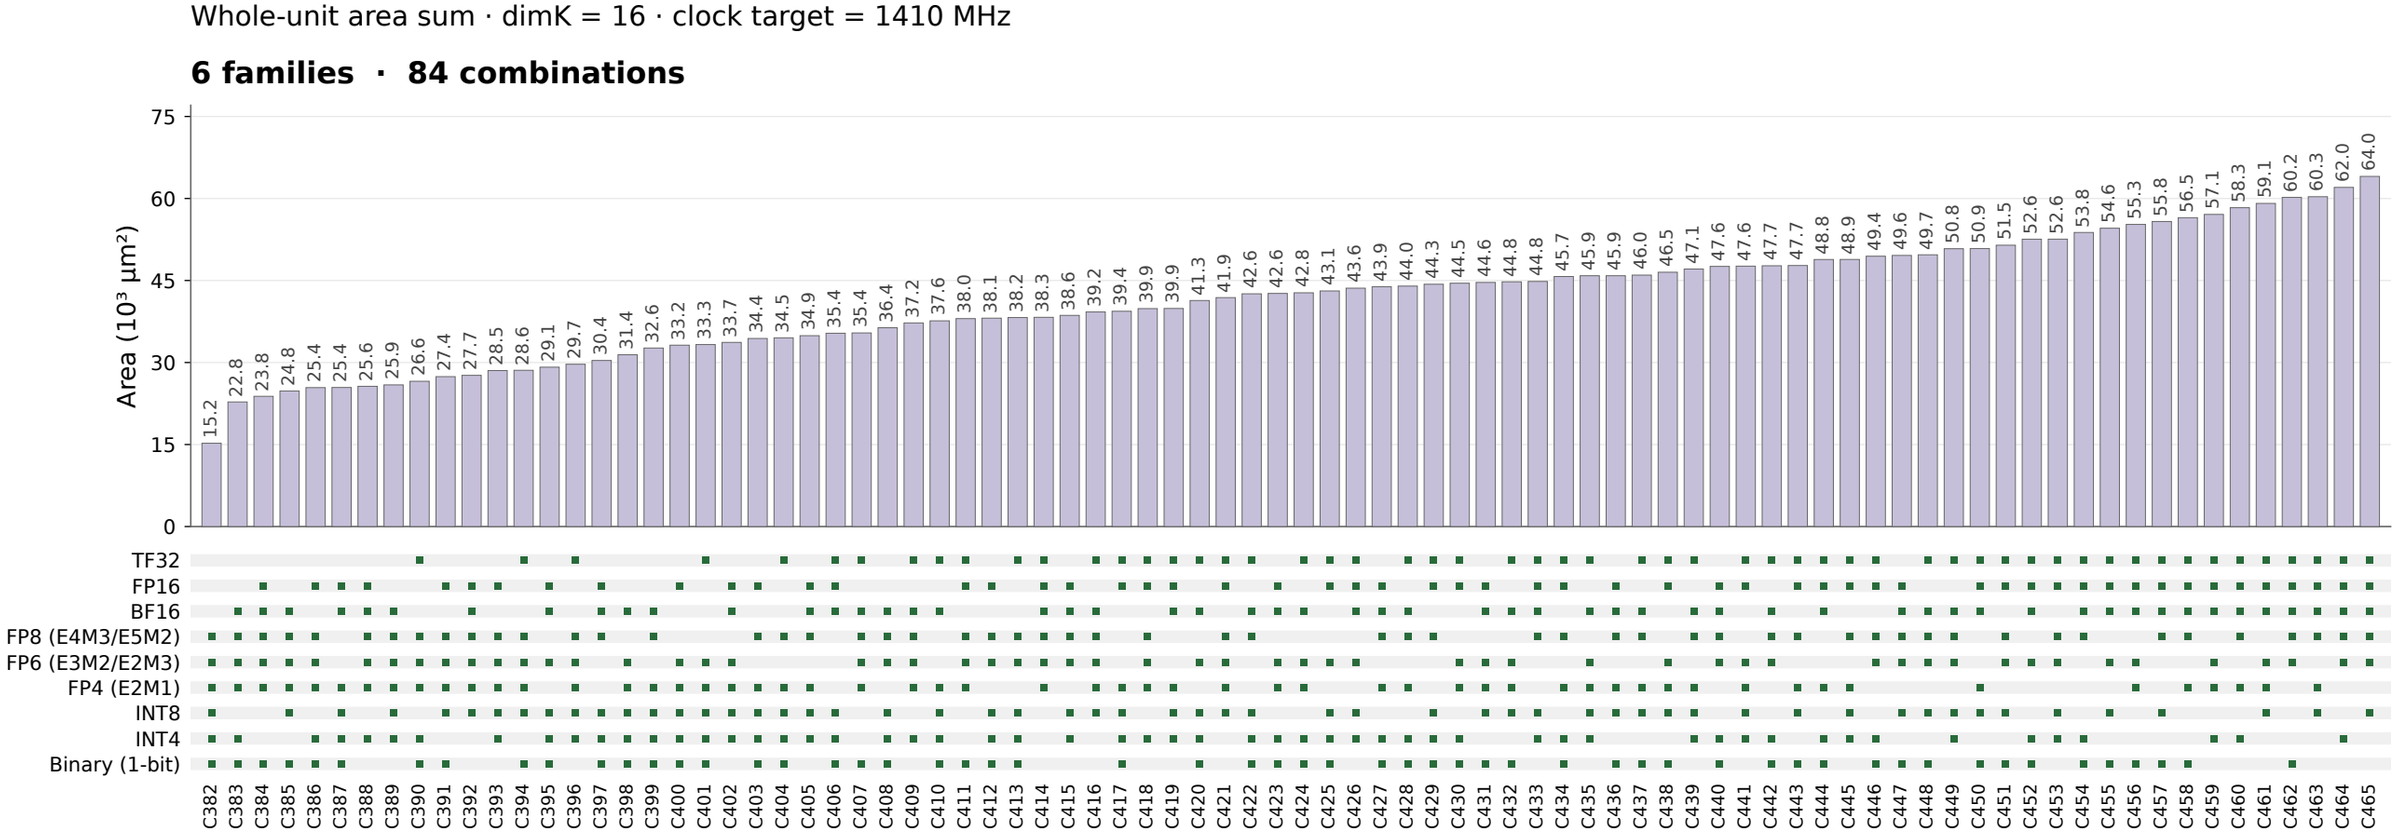

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

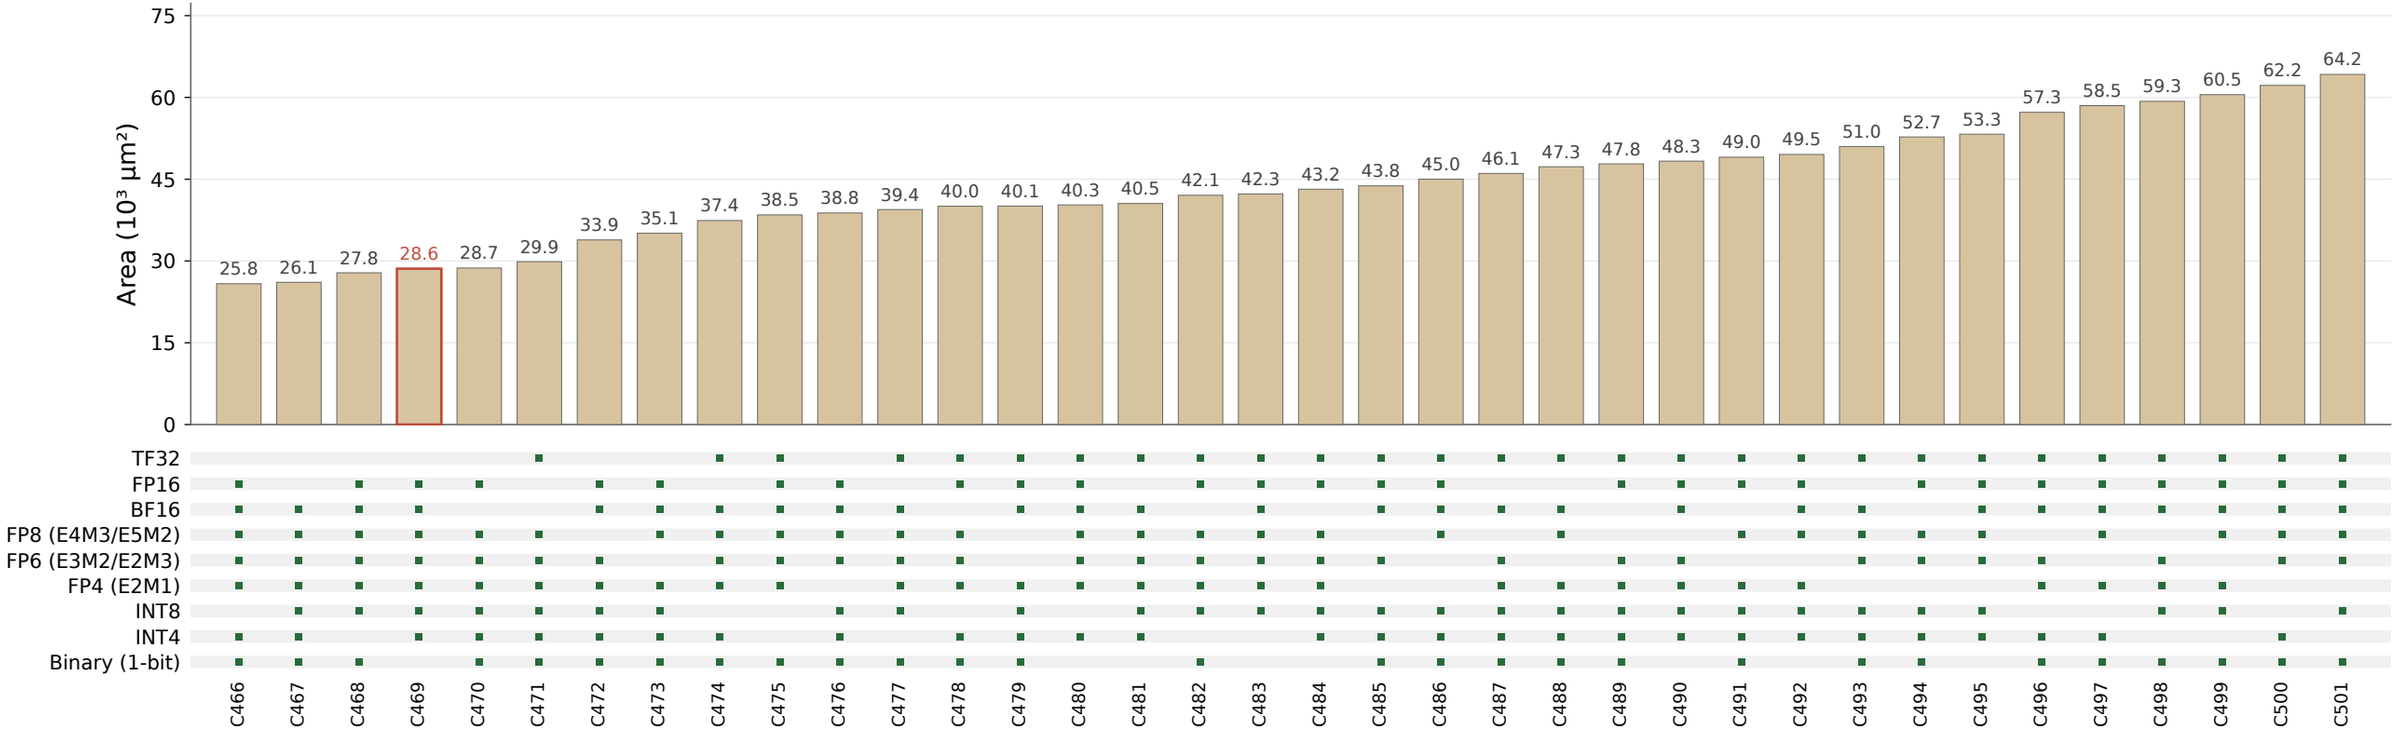

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Whole-unit area sum · dimK = 16 · clock target = 1410 MHz

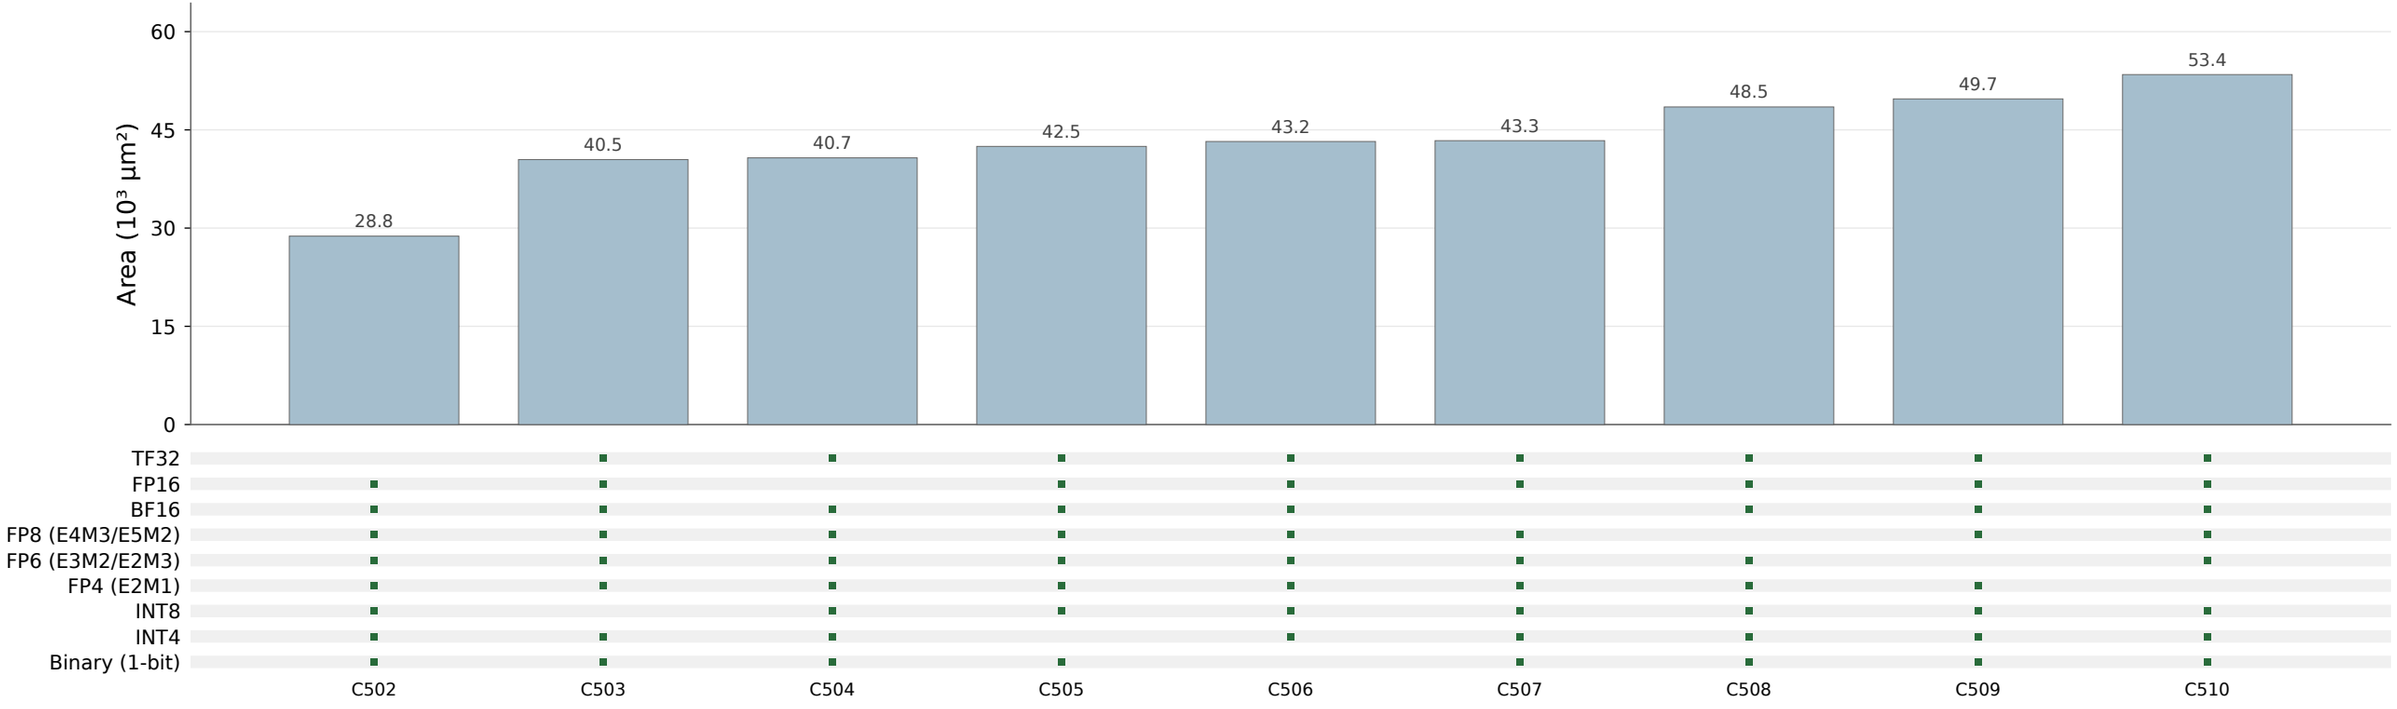

7 families · 36 combinations

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Whole-unit area sum · dimK = 16 · clock target = 1410 MHz

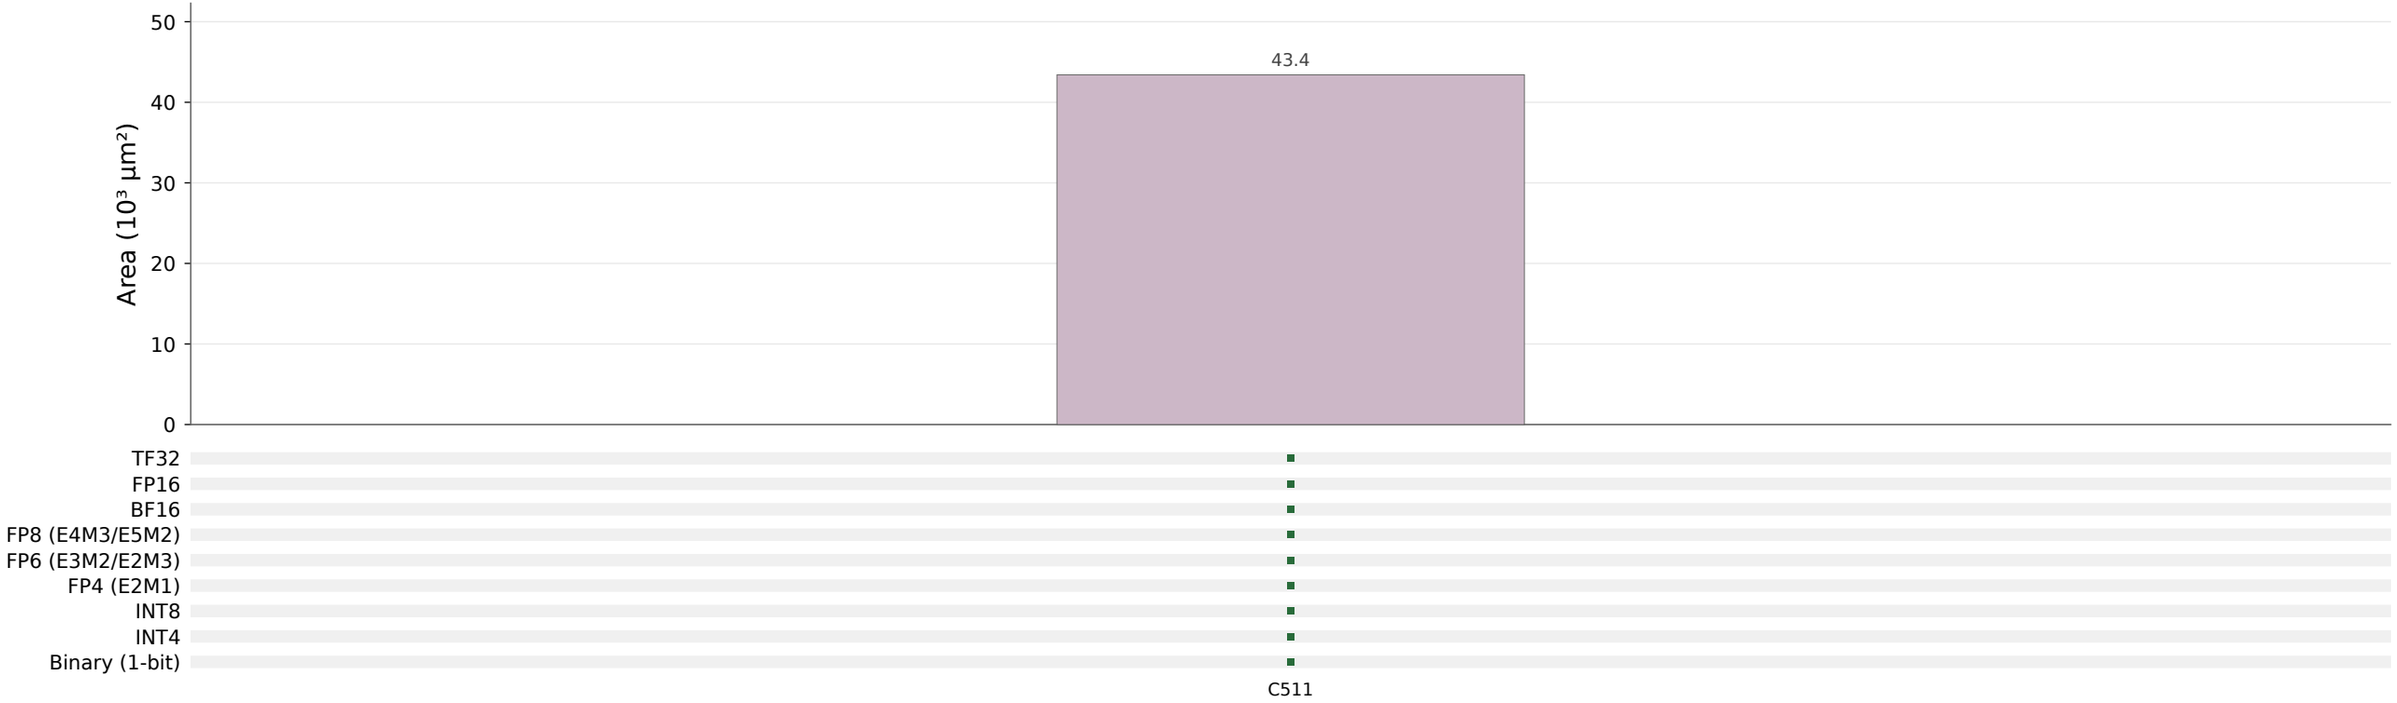

8 families · 9 combinations

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.

Whole-unit area sum · dimK = 16 · clock target = 1410 MHz

9 families · 1 combination

Red outline: one measured unit. Other bars: derived component sums, excluding integration overhead. All configurations are listed in all_combinations.csv.
